

Climatek™

GRK Fasteners™ All Weather Coating

GRK Fasteners™ revolutionary **Climatek™** coating is only available on GRK products.

GRK's **Climatek™** coating consists of a total of six layers of various materials, including several layers of zinc and polymer.

Climatek™ has been tested for salt spray resistance and, more importantly, for *Kesternich* durability. *Kesternich* cycles are a more advanced way of testing a coated material. Each *Kesternich* cycle simulates heat, cold, wind, water, salt, as well as a variety of other elements, whereas salt spray testing merely uses saltwater for its tests.

Climatek™ passed 29 *Kesternich* cycles, making it the most advanced coating of its kind.

GRK's **Climatek™** conforms with ICC-NES Report # NER-643 which allows for use of triple zinc polymer coated fasteners in contact with ACQ treated woods.
